MONOCLONAL ANTIBODY

PE labeled Anti-Mouse Sca-1

Code No.	Clone	Subclass	Quantity
D052-5	238B	Rat IgG2a	50 tests

BACKGROUND: Sca-1 is a member of the Ly-6 antigen family which molecular mass of 8 kDa under nonreducing conditions and of 18 kDa under reducing conditions. Mouse hematopoietic stem cell expresses low levels of Thy-1 antigen (Thy-1^{lo}) and to be lineage-negative (Lin^-); not express markers characteristic of B cells (B220), granulocytes (Gr-1), myelomonocytic cells (Mac-1) and T lymphocytes (CD4 and CD8). Recentry, new monoclonal antibody, anti-Sca-1, was used to purify stem cells from the Thy-1^{lo}, Lin^- bone marrow subpopulation. Thy-1^{lo}, Lin^-, Sca-1^+ (but not the Thy-1^{lo}, Lin^-, Sca-1^-) population of bone marrow cells are highly purified pluripotent stem cells. They read out with nearly unit efficiency in assays for primitive myeloerythroid and thymic progenitor, and have a capability to admit lethally irradiated mouse to survive and be restored in all blood-cell lineages. The Thy-1^{lo}, Lin^-, Sca-1^+ subpopulation thought to have all stem cells present in the bone marrow.

SOURCE: This antibody was purified from culture supernatant using protein G agarose. This hybridoma (clone 238B) was established by fusion of mouse myeloma cell P3X with Rat splenocyte immunized with mouse Sca-1 transfected LO cells.

FORMULATION: 50 tests in 1 mL volume of PBS containing 1% BSA and 0.09% NaN_3.
*Azide may react with copper or lead in plumbing system to form explosive metal azides. Therefore, always flush plenty of water when disposing materials containing azide into drain.

STORAGE: This antibody solution is stable for one year from the date of purchase when stored at 4°C.

REACTIVITY: This antibody reacts with mouse Sca-1 on Flow cytometry.

APPLICATIONS:
Western blotting; Not tested
Immunoprecipitation; Not tested
Immunohistochemistry; Not tested
Immunocytochemistry; Not tested
Flow cytometry; 20 µL (ready for use)

Detailed procedure is provided in the following **PROTOCOL**.

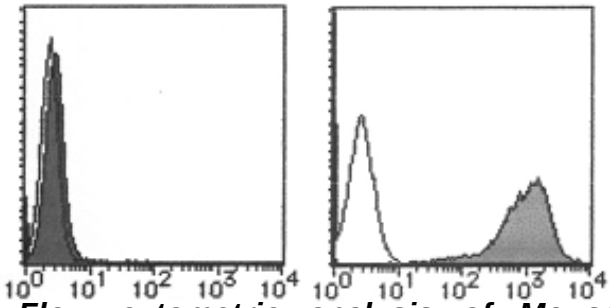
RELATED PRODUCTS:
D052-3 Anti-mouse Sca-1 (238B)
D052-6 Biotin labeled anti-mouse Sca-1 (238B)
D160-3 Anti-mouse Ly49Q (2E6)
D160-4 FITC labeled anti-mouse Ly49Q (2E6)
D160-5 PE labeled anti-mouse Ly49Q (2E6)

SPECIES CROSS REACTIVITY:

Species	Human	Mouse	Rat
Cell	Not Tested	LO	Not Tested
Reactivity on FCM		+	

INTENDED USE:
For Rsearch Use Only. Not for use in diagnostic procedures.

REFERENCE:
1) Petersen, B.E., *et al*., *Hepatology* **37**, 632-640 (2003)



Flow cytometric analysis of Mouse Sca-1 expression on Jurkat cells (left) and LO cells (right). *Open histograms indicate the reaction of isotypic control to the cells. Shaded histograms indicate the reaction of D052-5 to the cells.*

PROTOCOL:
Flow cytometric analysis for adherent cells
We usually use Fisher tubes or equivalents as reaction tubes for all step described below.
1) Detach the cells from culture dish using Cell Dissociation Buffer (Invitrogen; code no. 13151-014).
2) Wash the cells 3 times with washing buffer [PBS containing 2% fetal calf serum (FCS) and 0.1% NaN_3].
3) Resuspend the cells with washing buffer ($5x10^6$ cells/mL).
4) Add 50 µL of the cell suspension into each tube, and centrifuge at 500 x g for 1 minute at room temperature (20~25°C). Remove supernatant by careful aspiration.

5) Add 10 μL of normal goat serum containing 1 mg/mL normal human IgG and 0.1% NaN_3 to the cell pellet after tapping. Mix well and incubate for 5 minutes at room temperature
6) Add 20 μL of the PE labeled anti-mouse Sca-1 monoclonal antibody (238B). Mix well and incubate for 20 minutes at room temperature.
7) Add 1 mL of the washing buffer followed by centrifugation at 500 x g for 1 minute at room temperature. Remove supernatant by careful aspiration.
8) Resuspend the cells with 500 μL of the washing buffer and analyze by a flow cytometer.

(Positive control for flow cytometry; LO)
